

# Propulsion Technologies for Future Aircraft Generations: A NASA Perspective

---

**Dr. Rubén Del Rosario, Project Manager**  
**Subsonic Fixed Wing Project**  
**Fundament Aeronautics Program**

ASME's Turbo Expo 2012  
Copenhagen, Denmark  
June 11-15, 2012

# SFW Strategic Framework/Linkage

## Strategic Thrusts

1. Energy Efficiency

2. Environmental Compatibility

TECHNOLOGY BENEFITS*	TECHNOLOGY GENERATIONS (Technology Readiness Level = 4-6)		
	N+1 (2015)	N+2 (2020**)	N+3 (2025)
Noise (cum margin rel. to Stage 4)	-32 dB	-42 dB	-71 dB
LTO NOx Emissions (rel. to CAEP 6)	-60%	-75%	-80%
Cruise NOx Emissions (rel. to 2005 best in class)	-55%	-70%	-80%
Aircraft Fuel/Energy Consumption <sup>‡</sup> (rel. to 2005 best in class)	-33%	-50%	-60%

\* Projected benefits once technologies are matured and implemented by industry. Benefits vary by vehicle size and mission. N+1 and N+3 values are referenced to a 737-800 with CFM56-7B engines, N+2 values are referenced to a 777-200 with GE90 engines

\*\* ERA's time-phased approach includes advancing "long-pole" technologies to TRL 6 by 2015

‡ CO<sub>2</sub> emission benefits dependent on life-cycle CO<sub>2e</sub> per MJ for fuel and/or energy source used

**Research addressing revolutionary N+3 Goals with opportunities for near term impact**

# Goal-Driven Advanced Vehicle Concept Studies (N+3)

## purpose/approach

---

- Leverage external and in-house expertise
- Stimulate thinking to determine potential aircraft solutions to address significant performance, environmental, and operations issues of the future
- Identify advanced airframe and propulsion concepts and corresponding enabling technologies for commercial aircraft anticipated for 2030-35 EIS (market conditions permitting)
  - Develop plausible air travel scenario and define aircraft requirements
  - Generate advanced concept(s) that could thrive in future scenario
  - Anticipate changes in environmental sensitivity, demand, and energy
- Identify key driving technologies (traded at the system level)
- Prime the pipeline for future, revolutionary aircraft technology developments
- Use to inform and define SFW research portfolio and investments

# Goal-Driven Advanced Vehicle Concept Studies (N+3)

### Trends:

- Tailored/Multifunctional Structures
- High AR/Active Structural Control
- Highly Integrated Propulsion Systems
- Ultra-high BPR (20+ w/ small cores)
- Alternative fuels and emerging hybrid electric concepts
- Noise reduction by component, configuration, and operations

Advances on multiple fronts are required to meet national goals - many broadly applicable features, some uniquely enabling.

# 2030 Fleet Scenario – Boeing

Boeing Current Market Outlook based; growth tied to GDP growth

2030 Fleet			
	Regional	Medium	Large
Number of Aircraft	2,675	22,150	7,225
Family Midpoint # of Seats	70	154	300
Avg. Distance	575	900	3,300
Max Distance	2,000	3,500	8,500
Avg. Trips/day	6.00	5.00	2.00
Avg. MPH	475	500	525
Fleet Daily Air Miles (K)	8,500	100,000	55,000
Daily Miles	3,200	4,500	7,600
Daily Hours	6.92	9.23	13.96

Medium/Large Single-aisle aircraft envisioned to dominate composition of 2030 transport fleet and miles flown

# Scenario Driven Configurations – Boeing

## N+3 Reference “Refined SUGAR”

## N+3 High L/D “SUGAR High”

## N+3 Electric Trade Aircraft “SUGAR Volt”

- Fuel-Cell
- Batteries
- Hybrid

## N+3 Reduced Noise HWB “SUGAR Ray”

Awarded Phase II NRA to continue work on SUGAR Volt concept

# N+3 Scenario and Requirements - MIT

Size	<ul style="list-style-type: none"><li>▪ <b>Domestic:</b> 180 passengers @ 215 lbs/pax (737-800)</li><li>▪ <b>International:</b> 350 passengers @ 215 lbs/pax (777-200LR)</li><li>▪ Multi-class configuration</li><li>▪ Increased cabin baggage</li></ul>
Range	<ul style="list-style-type: none"><li>▪ <b>Domestic:</b> US transcontinental; max range 3,000 nm with reserves</li><li>▪ <b>International:</b> Transpacific; max range 7,600 nm with reserves</li></ul>
Speed	<ul style="list-style-type: none"><li>▪ <b>Domestic:</b> Minimum of Mach 0.72</li><li>▪ <b>International:</b> Minimum of 0.8 (Driven by fuel efficiency)</li></ul>
Runway Length	<ul style="list-style-type: none"><li>▪ <b>Domestic:</b> 5,000 ft balanced field</li><li>▪ <b>International:</b> 9,000 ft balanced field</li></ul>
Fuel & Emissions	<ul style="list-style-type: none"><li>▪ N+3 target: 70% fuel burn improvement</li><li>▪ Meet N+3 emission target (75% below CAEP/6 NOx stringency)</li><li>▪ Consider alternative fuels and climate impact</li></ul>
Noise	<ul style="list-style-type: none"><li>▪ N+3 target: (-71 dB cumulative below FAA Stage 4 limits)</li></ul>
Other	<ul style="list-style-type: none"><li>▪ Compatibility with NextGen</li><li>▪ Wake vortex robustness</li><li>▪ Meet or exceed future FAA and JAA safety targets</li></ul>

# Scenario Driven Configurations - MIT

**Double-Bubble (D series):**  
modified tube and wing with lifting body

**Baseline: B737-800**  
**Domestic size**

**Hybrid Wing Body (H series)**

**Baseline: B777-200LR**  
**International size**

- Developed 2 aircraft based on domestic or international usage
- Awarded Phase II NRA to continue investigation of D-series concept

# Scenario Analysis – Northrop Grumman

- Work entailed developing future scenario(s) that describe the challenges that may be facing commercial aircraft operators in the 2030-35 and beyond timeframe
  - Provides a context within which the proposer's advanced vehicle concept(s) may meet a market need/enter into service
- N-G provided four scenarios that covered the range of possibilities
  - King Carbon
  - Not In My Backyard
  - Bright Bold Tomorrow
  - Doom and Gloom
- Scenarios used to develop weighting factors for use in design trade studies

Individual Scenario Weighting Factors

Combined Scenario Weighting Factors

# Scenario Driven Configuration – Northrop Grumman

## Preferred Concept Vehicle

		<u>Target</u>	<u>Result</u>
N+3 (2030-2035 Service Entry) Advanced Aircraft Concepts Goals (Relative to User- Defined Reference)	Noise (Cum below Stage 4)	-71 EPNdB	-70 EPNdB
	LTO NOx Emmissions (below CAEP/6)	-75%	-75%
	Performance: Aircraft Fuel Burn	better than 70%	64%
	Performance: Field Length	Exploit Metroplex Concepts	Exploit Metroplex Concepts
Mission Requirements Derived from Traffic Study	Range	1600nm	1600nm
	Passengers	120	120
	Field Length, TO and Ldg (SL, Std Day)	5,000 feet	5,000 feet
	Cruise Mach	0.75	0.75
	Cruise Altitude	< FL450	< FL450

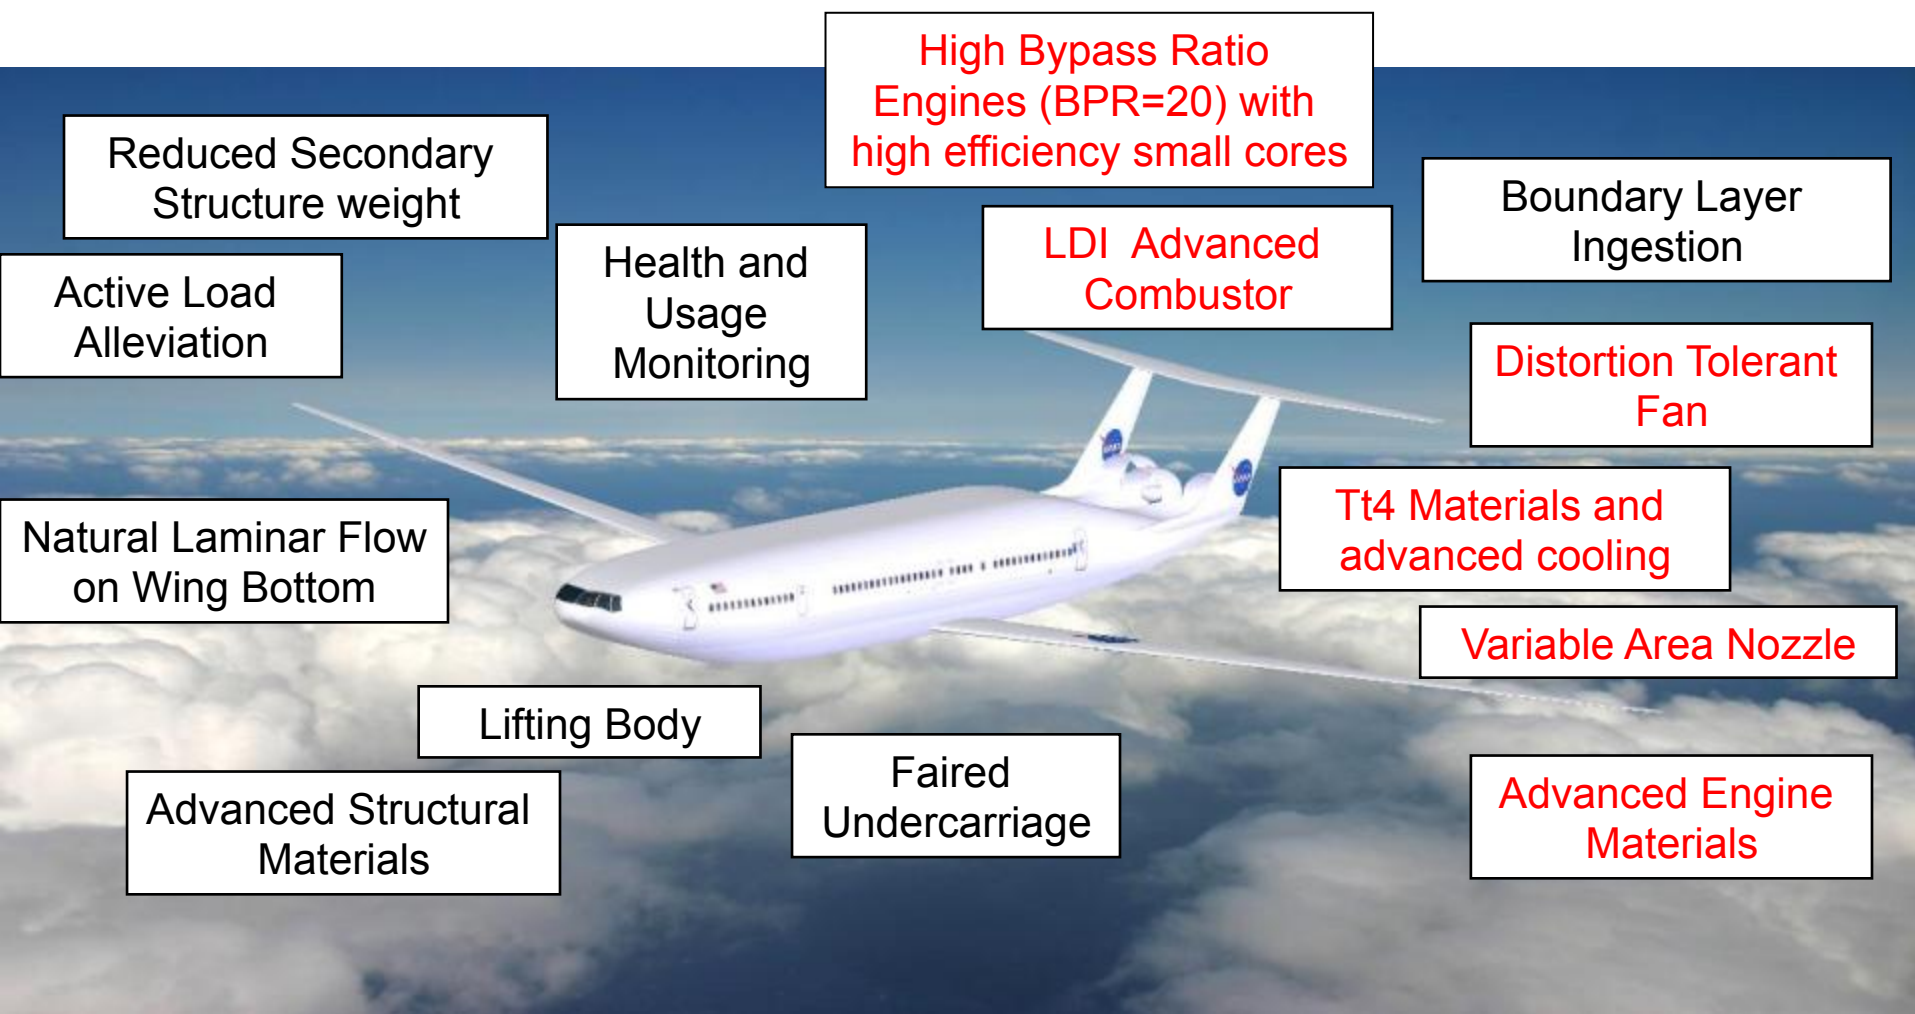

# N+3 Propulsion Technologies

# SUGAR Volt Engine Walkaround - hFan

# D8 Airframe & Propulsion Technology Overview

Key Propulsion Technologies listed in Red

# Northrop Grumman Advanced Engine Architecture

## Three-Shaft Turbofan

- High BPR ( $\sim 18$ ) = propulsive efficiency
- High OPR ( $\sim 50$ ) = thermal efficiency
  - Low noise
  - Low weight

## Technology Suite

Three-shaft Turbofan Engine  
Ultra-High Bypass Ratio of  $\sim 18$   
CMC Turbine Blades  
Lean-Burn CMC Combustor  
Intercooled Compressor Stages  
Swept Fan Outlet Guide Vanes  
Fan Blade Sweep Design  
Lightweight Fan/Fan Cowl  
Compressor Flow Control  
Active Compressor Clearance Control  
Variable Geometry Nozzles

- Geared turbofan dropped due to similarities with three-shaft turbofan
- Open rotor had best sea level static fuel consumption
- Open rotor potential noise not quantified in time to be included
